Java

Serialization
and
Deserialization

```java
class MyClass implements Serializable {
    private static final long serialVersionUID = 1L;

    private String message;

    public MyClass(String message) {
        this.message = message;
    }
}
```

Serialize to file

```java
MyClass original = new MyClass("Hello, serialization!");
try (ObjectOutputStream out =
                new ObjectOutputStream(
                        new FileOutputStream("data.ser"))) {
    out.writeObject(original);
}
```

Java

Deserialize from file

```java
try (ObjectInputStream in =
                new ObjectInputStream(
                        new FileInputStream("data.ser"))) {
    MyClass restored = (MyClass) in.readObject();
}
```
